Instructions for Use

Before use in an aquarium:

1. Rinse the root thoroughly with clean water, without soap or chemicals.
2. Soak it for several days to remove impurities and promote stabilization.
3. Change the soaking water regularly until it is clear.
4. Optionally, boil the root (30–60 minutes) to speed up tannin removal.
5. Place the root in the aquarium after soaking. Natural tannin release may slightly color the water (harmless to fish).

Before use in a terrarium:

1. Brush and rinse the root carefully with clean water.
2. Let it dry completely if used in a dry environment.
3. Arrange it as a decorative element or a natural support for your reptiles, amphibians, or invertebrates.

Precautions:

- 100% natural product, each piece is unique.
- Do not use detergents or chemicals for cleaning.
- Check compatibility with housed species (size, safety, environment).
- For decorative use only; not intended for consumption.
